

EE 446 Lab 5

1. A spectrogram or MFCC representation collapses this into a much smaller number of frames.
2. For full integer quantization, the converter needs to figure out how to map the continuous, unbounded range of float activation values at every point in the network to discrete 8-bit integers.
3. It's the core method that turns raw .wav files into a batch of ready-to-use feature vectors and labels.
4. array and its length respectively.

```
